

How To Find and Source an Image with Creative Commons and Flickr

Learn step by step how to find and source a Creative Commons licensed image through Flickr.

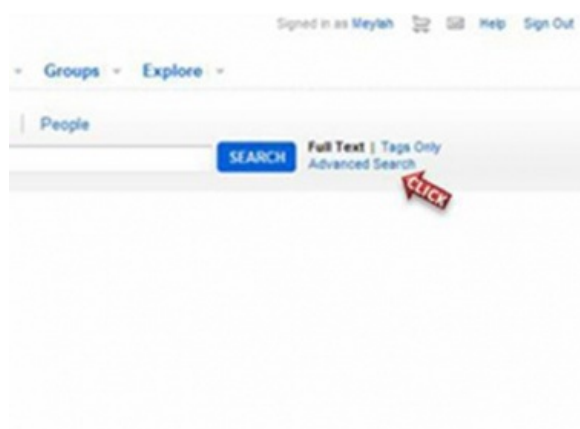

Step 1: Sign into Flickr

Go to **Flickr** and sign into your account. If you don't have an account, sign up for an account to get a username and password.

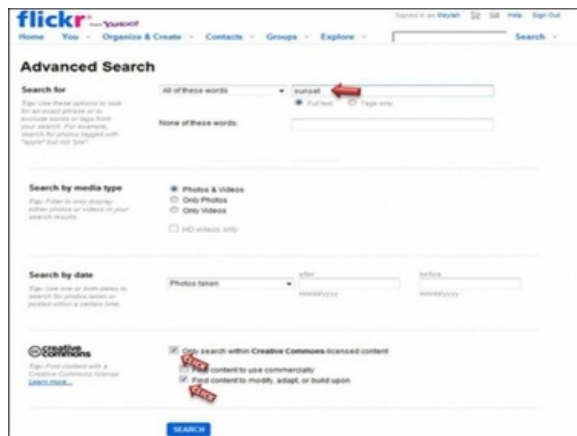

Step 2: Search

Click on the drop-down list for Search and select "Everyone's Uploads".

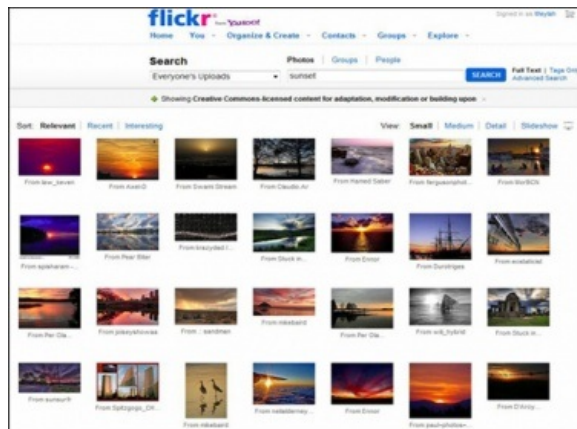

Step 3: Advanced Search

Click on the Advanced Search button to begin your search for Creative Commons images.

Step 4: Enter Your Keyword(s) and Select Creative Commons

Enter the keyword(s) for your search. In this case, I've chosen to search for an image with a "sunset". At the bottom of this window, you will need to check the box that is titled "Only search within Creative Commons-licensed content" and then I've also checked the box "Find content to modify, adapt or build upon" because as you can see from the main image above, we added the Byte-Syze Learning icon and so we need to ensure it's going to be ok to modify the original image.

Step 5: Find an Image

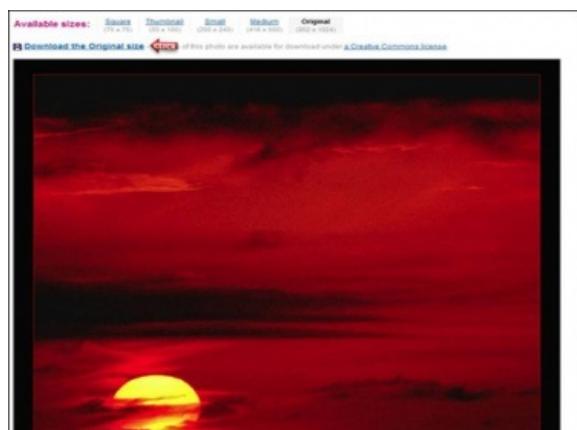

Find an image from the selection available and click on that image.

MORE

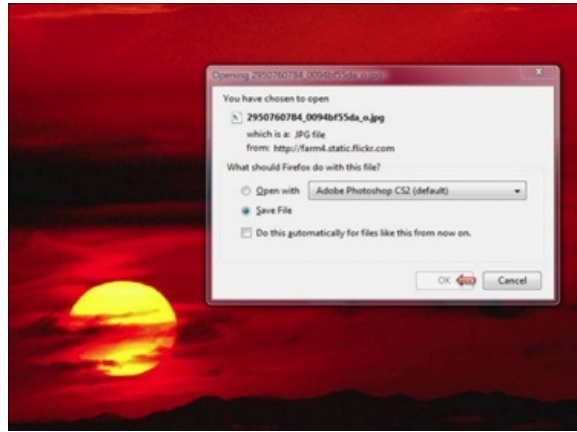

Step 6: Select the Image Size

Once you select your preferred image, scroll down on the right and view the section for Additional Information. Click on the link "Some rights reserved" to see the licensing for the image.

Step 7: Download the Image

This will show you the licensing of the image and what you are free to do. As you can see, we can share the image on our blog as well as remix or adapt the image as we have done by adding the Byte-Syze Learning logo above.

Step 8: Save the Image

Once you have selected your image, select the "All Sizes" button above the image in order to select the size you want to download.

Step 9: Add a Comment on Flickr

Click the "Download the Original size" link to download your image. It is always best to download the image onto your desktop in order to use the image from your own files rather than link to it as the owner may move or replace the original image and if that happens, your blog or publication may be impacted.
